SOUMITH AKULA

Boston, MA | soumithakula@gmail.com | github.com/Soumithroy

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of professional development experience building and supporting enterprise applications across financial services, technology consulting, and digital payments. Skilled in Python, Java, Linux, Git, automated testing, CI/CD, and cloud-based development. Contributes to backend services, debugging, test automation, containerized deployments, and Agile delivery, with an interest in open-source and AI-enabled engineering workflows.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL, Bash / Shell Scripting, Go (working knowledge)

Backend & Engineering: REST APIs, FastAPI, Spring Boot, Microservices, Object-Oriented Programming, Debugging

Testing & Quality: Pytest, Unit Testing, Integration Testing, Regression Testing, Test Automation, Defect Tracking

Systems & Cloud: Linux / UNIX, RHEL, Docker, Kubernetes, OpenShift, AWS, Azure, GCP

DevOps & Tooling: Git, GitHub, Jenkins, GitLab CI, GitHub Actions, CI/CD, Ansible, Agile / Scrum

Additional Exposure: Podman, Distributed Systems, MLOps Concepts, AI-assisted Development, Open-source Workflows

EDUCATION

Master of Science in Computer and Information Sciences | University of Massachusetts Dartmouth, MA

Bachelor of Technology in Computer Science and Engineering | Jain University, Bangalore, India

PROFESSIONAL EXPERIENCE

Software Engineer | T. Rowe Price *Nov 2025 – Sep 2026*

- Developed Python backend services and REST APIs for investment data processing, portfolio reporting, and internal financial applications; optimized queries and data handling to improve API response times by 25%.
- Built reusable Python utilities for financial data validation, reconciliation, and scheduled processing, eliminating approximately 8–12 hours of repetitive manual work each week.
- Expanded automated API, unit, and integration testing with Pytest to validate investment business rules and data workflows, increasing test coverage from 65% to 85%.
- Troubleshot production issues across Linux services, application logs, and SQL queries; reproduced defects and delivered fixes that reduced repeat incidents by 20%.
- Containerized services with Docker and supported Kubernetes deployments, improving consistency across development, QA, and release environments.
- Enhanced Jenkins and GitHub Actions pipelines with automated tests, build checks, and deployment validation, cutting release verification time by 30%.
- Partnered with investment operations, product owners, and QA engineers to translate reporting needs into tested features and resolve financial data discrepancies before release.
- Optimized SQL queries and backend batch-processing logic for reporting workloads, reducing processing time by 20–30%.
- Participated in Agile planning, Git pull requests, code reviews, and defect triage; coordinated fixes and releases with DevOps and QA teams.
- Applied AI-assisted coding tools to support test-case drafting, debugging, and refactoring while reviewing changes for correctness, security, and maintainability.

Software Developer | IBM India *May 2021 – Aug 2023*

- Developed and maintained Python and Java backend components, REST APIs, and database integrations for enterprise client applications and operational workflows.
- Automated application health checks, log parsing, file processing, and data validation with Python, reducing manual support effort by 25–30%.
- Troubleshot Linux/UNIX application environments using Bash scripts, system logs, and command-line utilities to diagnose failures and streamline routine maintenance.
- Wrote Pytest and JUnit unit and integration tests, validated fixes with QA teams, and helped reduce regression defects by 15–20%.
- Updated Jenkins and GitLab CI pipelines to run automated builds, tests, and deployment checks, reducing recurring release activities by 20%.
- Helped package backend applications with Docker, resolving configuration and dependency issues across development and test environments.
- Investigated defects reported by QA and business users, traced root causes through application logs and SQL queries, and delivered fixes within sprint commitments.
- Improved database queries, error handling, and application logging to strengthen reliability and reduce delays in enterprise workflows.
- Collaborated with senior engineers on Git branching, pull requests, code reviews, documentation, and incremental feature delivery.
- Worked with cross-functional teams to clarify client requirements, define test scenarios, support integration testing, and verify release readiness.

Junior Software Developer | Paytm *Jul 2020 – Apr 2021*

- Implemented small backend enhancements and bug fixes for digital payment and transaction-related application workflows under senior engineer guidance.
- Worked with Java, SQL, and REST APIs to support transaction status checks, validation logic, and application data retrieval.
- Wrote and updated basic unit tests, verified API responses, and helped reproduce issues reported by QA and support teams.
- Used Git for feature branches and code changes, and participated in Agile standups, defect reviews, and release verification.
- Investigated application errors through logs and database queries, documenting root causes and escalating complex issues to senior developers.
